

WHAT IT DOES

Runs in your browser — drop an Allmoxy CSV, get material/edge/ship-date batches, printable stack sheets, and OptiCut-ready export files.

Import columns

Exported (9): OrderNumber, MaterialName, PartName, W, Length, Quantity, Label, Width, TopEdge.
Batching only: GroupID, Laser, Scoop, Slope, DrillFront, DividersFB, DividersSS, FileSlots, Ship Date.

Batch rules

- Split by material category + top edge + **ship date**
- **Special** orders (SPECIAL_ prefix) when Scoop/Slope/Dividers/Drill/FileSlots ≠ None
- **Laser is ignored** for special batches (Yes/No does not matter)
- Each order in exactly one batch; max-orders split available

Batch sidebar ▶ panel

Click ▶ on any batch to expand orders. Each row shows #order · pts · bx. Use – to remove from batch; click +#order chips to add back.

Print sheets

- Batch header shows **Ship Date**
- Each order: Order 602350 · 20 pts · 5 bx
- Box math: `ceil(parts ÷ 4)`

Export

Strips all batching columns. Round widths ON: merges rows, blanks W, notes original widths in Label when changed.

CATEGORIES

Category	Code	Examples
Plywood	PLY	Baltic birch ply
FAA	FAA	FAA materials
Solid wood	SLD	Alder, maple, oak
MDF / PVC / tape	MDF	MDF, melamine, PVC edges

OPERATOR CHECKLIST

1. Export CSV from Allmoxy (include Ship Date + extra columns if used).
2. Open app → drag & drop file → review batches (SPECIAL badge, ship date in meta).
3. Expand batch ▶ to verify/remove/add orders.
4. Print stack matrix → export CSV or ZIP → import into OptiCut.
