

WHAT IT DOES

Runs in your browser — drop an Allmoxy CSV, get material/edge/ship-date batches, printable stack sheets, and OptiCut-ready export files.

Import columns

**Exported (9):** OrderNumber, MaterialName, PartName, W, Length, Quantity, Label, Width, TopEdge.  
**Batching only:** GroupID, Laser, Scoop, Slope, DrillFront, DividersFB, DividersSS, FileSlots, Ship Date.

Batch rules

- Split by material category + top edge + **ship date**
- **Special** batches: `SPECIAL_` + material + top edge + ship date (never mixed with normal)
- If **any row** has Scoop/Slope/Dividers/Drill/FileSlots ≠ None → **whole sales order** is special
- **Not SPECIAL triggers:** GroupID, Laser
- Cut-list table shows **full import** (Scoop, GroupID, etc.); export strips batching columns
- Each order in exactly one batch; max-orders split available

Batch sidebar ▶ panel

Click ▶ on any batch to expand orders. Each row shows `#order · bx`. Use – to remove from batch; click **+#order** chips to add back.

Print sheets

- Batch header: **total boxes** + comma-separated **order numbers only**
- Each small order card: order + GroupID-qty (e.g. `602336 1-15, 2-3, 3-4`)
- Order total = sum of GroupID-qty; batch total = sum of order totals
- Width rows: `Width 6" · 2 bx` (per-height ceil)
- Box math: `ceil(parts ÷ 4)` per group and per height

Export

Strips all batching columns. Round widths ON: merges rows, blanks W, notes original widths in Label when changed.

CATEGORIES

| Category         | Code | Examples                 |
|------------------|------|--------------------------|
| Plywood          | PLY  | Baltic birch ply         |
| FAA              | FAA  | FAA materials            |
| Solid wood       | SLD  | Alder, maple, oak        |
| MDF / PVC / tape | MDF  | MDF, melamine, PVC edges |

OPERATOR CHECKLIST

1. Export CSV from Allmoxy (include Ship Date + extra columns if used).
2. Open app → drag & drop file → review batches (SPECIAL badge, ship date in meta).
3. Expand batch ▶ to verify/remove/add orders.
4. Print stack matrix → export CSV or ZIP → import into OptiCut.
