

DBS Drawers — OptiCut CSV Splitter

One-page guide · Allmoxy CSV → OptiCut cut lists & shop stack sheets

Live app:
drawerboxspecialties-ops.github.io/OptiCutExportAppV2/

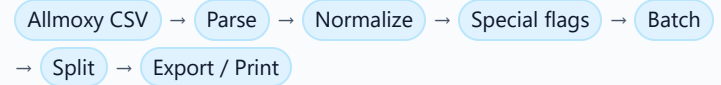

THE PROBLEM

Allmoxy exports one large CSV. OptiCut needs smaller, material-matched cut lists. The shop needs stack sheets with box counts per drawer height and order. This tool runs **entirely in your browser** — no upload, no server.

What you get

- **Split batches**
by material + top edge (+ special orders)
- **Cut-list CSV**
per batch for OptiCut
- **Stack matrix**
on screen and printable
- **ZIP export**
of all batch CSVs

End-to-end flow

1 · Import columns

Core (exported): OrderNumber, MaterialName, PartName, W, Length, Quantity, Label, Width, TopEdge.

Batching-only (not exported): GroupID, Laser, Scoop, Slope, DrillFront, DividersFB, DividersSS, FileSlots.

2 · Normalize

- Top edges cleaned to standard names
- **B-edge priority:**
front rows inherit back top edge when matched
- Material names shortened for OptiCut (≤ 32 chars)

3 · Special orders (default ON)

Order is **special** if any row has a value other than blank / None in Scoop, Slope, Dividers, DrillFront, or FileSlots. Gets a SPECIAL_ batch — never mixed with normal orders of same material/edge.

4 · Batch grouping

Bucket key: [SPECIAL_] + Category + Edge + Material + TopEdge

Category	Code
Plywood	PLY
FAA	FAA
Solid wood	SLD
MDF / PVC / tape	MDF

Each order appears in **exactly one** split batch.

5 · Box math & 6 · Export

$\text{boxes} = \text{ceil}(\text{parts} \div 4)$ — fixed shop rule for stack matrix and batch totals.

Export strips batching columns. With **round widths**

ON: Width rounds up, matching rows merge, Label notes original widths when changed.

OPERATOR CHECKLIST

1. Export CSV from Allmoxy (include extra columns if used).
2. Open the app → drag & drop the file.
3. Review batches (watch for **SPECIAL** badge).
4. Print stack matrix (current batch or all).
5. Export CSV or ZIP → import each file into OptiCut.
